Integrating the NoyesStorage - a step by step guide
NOYES TECHNOLOGIES

? If I am deciding to implement a NoyesStorage, how long does it take to get the first store up and running after signing of the contract?

The overall timeline is dependant on the number of storages and storage sizes. On average the first go live takes around **3 months** after the project agreement. The installation itself of each storage will be done within **2 weeks**.

Following configuration of each NoyesStorage, the total cost can be calculated to initiate the invoice process. Only after first payment the order will be taken as confirmed and capacities for the roll-out plan will be reserved. Below is a guide for the project timeline.

Store Data Transfer Layout, product master, order data

Payment of first invoice

Technical Integration API & testing 7 days

Delivery 5 days

Go Live after about 3 months

Project Start Project Planning per LOI <2 Days

Storage Configuration & 1st invoice 1 day

Technical Onboarding after payment <1 day

Supply Chain Set-up 3 - 4 weeks

Installation, Training, Testing 7 days
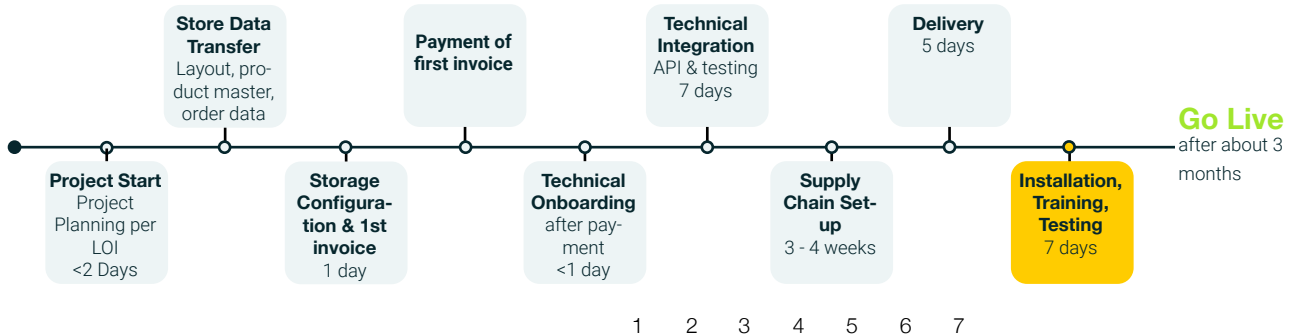

How long does the installation, training and testing phase take?

	1 2 3 4 5 6 7	
Installation	████████████	per store
Training		per customer
Testing		per store

If you extend your storage by our "Grow-as-you-go" installation format, these can be kept to a minimum.

? Let's assume we have agreed on the implementation of NoyesStorages for my own business. What resources will be necessary from my side and for what will they be responsible?

We will set up a project team at Noyes and ask you do the same. The below stated is a suggestion of how you can form the project team. One person can take on multiple roles.

Project Manager

Overall responsibility for project management

Time dependent on number of stores

Backend Engineer

API integration

Estimated:
5 days integration
2 - 3 days testing
2 days testing at go live

Store Manager

Per store

Supervision of physical installation

1 - 2 weeks

Warehouse / Facility Manager / Key User

1 day of training

+ supervision

+ Additional input may be necessary from your supply chain team, business analytics, etc.

How exactly does the implementation work?

Technical integration: API setup between your backend and the Noyes backend (only once per backend, ideally even for all stores). The NoyesUI will be done by Noyes completely. Still, the training of key users must be ensured.
Installation: the installation team will give you the details about expected delivery and the duration of installation. Installation is performed according to the predefined timeline.

? I am not able to stop my operations for several days for the installation of the storage. How can we ensure business continuity during the time of installation?

Don't worry - we've got you covered. NoyesStorage is designed to enable installation with minimum disruption of business activities. Check our "Grow-as-you-go" installation plan by scanning or clicking the QR code.

? Who from my company need to participate in the training before the Go-live and how can we ensure that everyone required knows how to work with the storage?

One Key User of your company will be enabled to be the Noyes Manager of your company. This Noyes Manager participates in a live training, is responsible for training of further employees (store managers and pickers) and will become an expert for the following topics: Noyes Administration, Noyes User Management, Inventory Maintenance and Noyes StorageUI.
